λ calculus is inconsistent

程序代写代做 CS编程辅导

Can find term R such

$R =_{\beta} \text{not}(R R)$

There are more term

that not make sense:

1 2, true false, etc.

WeChat: cstutorcs

Solution: rule out ill-formed terms by using types.

(Church 1940)

<https://tutorcs.com>

Introducing types

程序代写代做 CS编程辅导

Idea: assign a type to each “sensible” λ term.

Examples:

- for term t has type α , write $t :: \alpha$
- if x has type α then $\lambda x. x$ is a function from α to α
Write: $(\lambda x. x) :: \alpha \Rightarrow \alpha$
- for $s \ t$ to be sensible:
 s must be a function
 t must be right type for parameter
If $s :: \alpha \Rightarrow \beta$ and $t :: \alpha$ then $(s \ t) :: \beta$

Syntax for λ^{\rightarrow}

程序代写代做 CS编程辅导

Terms: $t \mid c \mid (t \ t) \mid (\lambda x. \ t)$
 $v, c \in C, \quad V, C$ sets of names

Types: $\tau \mid \nu \mid \tau \Rightarrow \tau$
 $b \in \{\text{bool}, \text{int}, \dots\}$ base types
 $\nu \in \{\alpha, \beta, \dots\}$ type variables

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

Context Γ :

Γ : function from variable and constant names to types.

QQ: 749389476

<https://tutorcs.com>

Term t has type τ in context Γ : $\Gamma \vdash t :: \tau$

Examples

程序代写代做 CS编程辅导

$\Gamma \vdash (\lambda x. x) :: \alpha \Rightarrow \alpha$

$[y \leftarrow \text{int}] \vdash y :: \text{int}$

$[z \leftarrow \text{bool}] \vdash (\lambda y. y) :: \text{bool}$

$[] \vdash \lambda f x. f x :: (\alpha \Rightarrow \beta) \Rightarrow \alpha \Rightarrow \beta$

Email: tutorcs@163.com

A term t is **well typed** or **type correct**
if there are Γ and τ such that $\Gamma \vdash t :: \tau$

<https://tutorcs.com>

Type Checking Rules

程序代写代做 CS编程辅导

Variables:

$$\overline{\Gamma \vdash x :: \Gamma(x)}$$

Application:

$$\frac{\Gamma \vdash t_1 :: \tau_2 \Rightarrow \tau \quad \Gamma \vdash t_2 :: \tau_2}{\Gamma \vdash (t_1 \ t_2) :: \tau}$$

Abstraction:

$$\frac{\Gamma[x \mapsto \tau_x] \vdash t :: \tau}{\Gamma \vdash (\lambda x. t) :: \tau_x \Rightarrow \tau}$$

Assignment Project Exam Help

Remember:

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

$$\frac{}{\Gamma \vdash x :: \Gamma(x)} \text{Var} \quad \frac{\Gamma \vdash t_1 :: \tau_2 \Rightarrow \tau \quad \Gamma \vdash t_2 :: \tau_2}{\Gamma \vdash (t_1 \ t_2) :: \tau} \text{App} \quad \frac{\Gamma[x \leftarrow \tau_x] \vdash t :: \tau}{\Gamma \vdash (\lambda x. t) :: \tau_x \Rightarrow \tau} \text{Abs}$$

More complex Example

程序代写代做 CS编程辅导

$$\frac{\frac{\Gamma \vdash f :: \alpha \Rightarrow (\alpha = \beta)}{\Gamma \vdash f x :: \alpha \Rightarrow \beta} \quad \frac{\Gamma \vdash x :: \alpha}{\Gamma \vdash x :: \alpha} \text{Var} \quad \frac{\Gamma \vdash x :: \alpha}{\Gamma \vdash x :: \alpha} \text{App} \quad \frac{\Gamma \vdash x :: \alpha}{\Gamma \vdash x :: \alpha} \text{Var} \quad \frac{\Gamma \vdash x :: \alpha}{\Gamma \vdash x :: \alpha} \text{App}$$

WeChat: tutores

$$\frac{\frac{[f \leftarrow \alpha \Rightarrow \alpha \Rightarrow \beta] \vdash \lambda x. f x x :: \alpha \Rightarrow \beta}{\Box \vdash \lambda f x. f x x :: (\alpha \Rightarrow \alpha \Rightarrow \beta) \Rightarrow \alpha \Rightarrow \beta} \text{Abs} \quad \frac{\Box \vdash \lambda f x. f x x :: (\alpha \Rightarrow \alpha \Rightarrow \beta) \Rightarrow \alpha \Rightarrow \beta}{\Box \vdash \lambda f x. f x x :: (\alpha \Rightarrow \alpha \Rightarrow \beta) \Rightarrow \alpha \Rightarrow \beta} \text{Abs}$$

Email: tutores@163.com

QQ: 749389476

$$\Gamma = [f \leftarrow \alpha \Rightarrow \alpha \Rightarrow \beta, x \leftarrow \alpha]$$

<https://tutores.com>

Remember:

More general Types

程序代写代做 CS编程辅导

A term  more than one type.

Example: $\Box \vdash \text{bool} \Rightarrow \text{bool}$
 $\Box \vdash \lambda x. x :: \alpha \Rightarrow \alpha$

WeChat: cstutorcs

Some types are more general than others.

$\tau \lesssim \sigma$ if there is a substitution S such that $\tau = S(\sigma)$

Email: tutorcs@163.com

QQ: 749389476

Examples:

<https://tutorcs.com>

$\text{int} \Rightarrow \text{bool} \lesssim \alpha \Rightarrow \beta \lesssim \beta \Rightarrow \alpha \not\lesssim \alpha \Rightarrow \alpha$

Most general Types

程序代写代做 CS编程辅导

Fact: each type correct term has a most general type

Formally:

$$\Gamma \vdash t :: \tau \implies \tau :: \sigma \wedge (\forall \sigma'. \Gamma \vdash t :: \sigma' \implies \sigma' \lesssim \sigma)$$

It can be found by executing the typing rules backwards.

WeChat: cs_tutorcs

Assignment Project Exam Help

- **type checking:** checking if $\Gamma \vdash t :: \tau$ for given Γ and τ
- **type inference:** computing Γ and τ such that $\Gamma \vdash t :: \tau$

Email: tutorcs@163.com

QQ: 749389476

Type checking and type inference on λ^{\rightarrow} are decidable.

<https://tutorcs.com>

What about β reduction?

程序代写代做 CS编程辅导

Definition β reduction stays the same.

Fact: Well typed terms stay well typed during β reduction

Formally: $\Gamma \vdash s :: \tau \wedge s \rightarrow_{\beta} t \implies \Gamma \vdash t :: \tau$

Email: tutorcs@163.com

This property is called **subject reduction**

QQ: 749389476

<https://tutorcs.com>

What about termination?

程序代写代做 CS编程辅导

β reducible  \rightarrow always terminates.

WeChat: cstutorcs

(Alan Turing, 1942)

Assignment Project Exam Help

$\rightarrow =_{\beta}$ is decidable Email: tutorcs@163.com

To decide if $s =_{\beta} t$, reduce s and t to normal form (always exists, because \rightarrow_{β} terminates), and compare result.

$\rightarrow =_{\alpha\beta\eta}$ is decidable <https://tutorcs.com>

This is why Isabelle can automatically reduce each term to $\beta\eta$ normal form.

What does this mean for Expressiveness?

程序代写代做 CS编程辅导

Checkpoint:

- untyped lambda calculus is Turing complete
(all computable functions can be expressed)
- but it is inconsistent
- λ^{\rightarrow} "fixes" the inconsistency problem by adding types
- Problem: it is not Turing complete anymore!

WeChat: cstutorcs

Not all computable functions can be expressed in λ^{\rightarrow} !
(non terminating functions cannot be expressed)

Email: tutorcs@163.com

QQ: 749389476

But wait... typed functional languages are Turing complete!

<https://tutorcs.com>

What does this mean for Expressiveness?

程序代写代做 CS编程辅导

So...

- typed functional languages are Turing complete
- but λ^{\rightarrow} is not...
- How does this work?
- By adding one single constant, the Y operator (fix point operator), to λ^{\rightarrow}
- This introduces the non-termination that the types removed, but in a safe way that prevents inconsistency

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@t63.com

QQ: 749389476

<https://tutorcs.com>

Fact: If we add Y to λ^{\rightarrow} as the only constant, then each computable function can be encoded as closed, type correct λ^{\rightarrow} term.

- Y is used for recursion
- lose decidability (what does $Y (\lambda x. x)$ reduce to?)

Types and Terms in Isabelle

程序代写代做 CS编程辅导

Types: $\tau ::= b \mid ' \nu \mid ' \nu :: C \mid \tau \Rightarrow \tau \mid (\tau, \dots, \tau) K$
 $b \in \{\text{bool}, \dots\}$ base types
 $\nu \in \{\alpha, \beta, \dots\}$ variables
 $K \in \{\text{set}, \dots\}$ type constructors
 $C \in \{\text{order}, \text{linord}, \dots\}$ type classes

WeChat: cstutorcs

Terms: $t ::= v \mid c \mid ?v \mid (t \ t) \mid (\lambda x. t)$
 $v, x \in V, \quad c \in C, \quad V, C \text{ sets of names}$

Email: tutorcs@163.com

- **type constructors:** construct a new type out of a parameter type.
Example: `int list`
- **type classes:** restrict type variables to a class defined by axioms.
Example: `$\alpha :: \text{order}$`
- **schematic variables:** variables that can be instantiated.

QQ: 749389476

<https://tutorcs.com>

Type Classes

程序代写代做 CS编程辅导

- similar to Haskell's `Ord` type class, but with semantic properties

```
class order =  
  assumes order_refl: "x ≤ x"  
  assumes order_trans: "[x ≤ y; y ≤ z] ⇒ x ≤ z"  
  ...
```

- theorems can be proved in the abstract

```
lemma order_less_trans:  
  "∧ x :: 'a :: order. [x < y; y < z] ⇒ x < z"
```

- can be used for subtyping

```
class linorder = order +  
  assumes linorder_linear: "x ≤ y ∨ y ≤ x"
```

- can be instantiated
- ```
instance nat :: "linorder" by ...
```

## Schematic Variables

程序代写代做 CS编程辅导

$$\frac{X \quad Y}{X \wedge Y}$$

→  $X$  and  $Y$  must be instantiated to apply the rule

But: lemma " $x + 0 = 0 + x$ "

WeChat: cstutorcs

→  $x$  is free

→ convention: lemma must be true for all  $x$

→ during the proof,  $x$  must **not** be instantiated

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

**Solution:**

QQ: 749389476

Isabelle has **free** ( $x$ ), **bound** ( $\lambda x$ ), and **schematic** ( $?X$ ) variables.

<https://tutorcs.com>

**Only schematic variables can be instantiated.**

Free converted into schematic after proof is finished.

# Higher Order Unification

程序代写代做 CS编程辅导

## Unification:

Find substitution  $\sigma$  on schematic variables for terms  $s, t$  such that  $\sigma(s) = \sigma(t)$

## In Isabelle:

Find substitution  $\sigma$  on schematic variables such that  $\sigma(s) =_{\alpha\beta\eta} \sigma(t)$

WeChat: cstutorcs

Assignment Project Exam Help

## Examples:

Email: tutorcs@163.com

$$\begin{aligned} ?X \wedge ?Y &=_{\alpha\beta\eta} x \wedge x & [?X \leftarrow x, ?Y \leftarrow x] \\ ?P \ x &=_{\alpha\beta\eta} x \wedge x & [?P \leftarrow \lambda x. x \wedge x] \\ P \ (?f \ x) &=_{\alpha\beta\eta} ?f \ x & [?f \leftarrow \lambda x. x, ?Y \leftarrow P] \end{aligned}$$

QQ: 749389476

https://tutorcs.com

**Higher Order:** schematic variables can be functions.

# Higher Order Unification

程序代写代做 CS编程辅导

- Unification modulo (Higher Order Unification) is semi-decidable
- Unification modulo is undecidable
- Higher Order Unification has possibly infinitely many solutions

**But:**

- Most cases are well-behaved
- Important fragments (like Higher Order Patterns) are decidable

WhatsApp: [tutorcs](https://tutorcs.com)

Assignment Project Exam Help

**Higher Order Pattern:**

- is a term in  $\beta$  normal form where
- each occurrence of a schematic variable is of the form  $?f\ t_1 \ \dots \ t_n$
- and the  $t_1 \ \dots \ t_n$  are  $\eta$ -convertible into  $n$  distinct bound variables

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

QQ: 749389476

<https://tutorcs.com>

## We have learned so far...

程序代写代做 CS编程辅导

- Simply typed lambda calculus:  $\lambda \rightarrow$
- Typing rules for  $\lambda \rightarrow$  variables, type contexts
- $\beta$ -reduction in  $\lambda \rightarrow$  subject reduction
- $\beta$ -reduction in  $\lambda \rightarrow$  always terminates
- Types and terms in Isabelle
