# Content

程序代写代做 CS编程辅导

## → Foundations & Principles

- Intro, Lambda natural deduction [1,2]
- Higher Order (part 1) [2,3<sup>a</sup>]
- Term rewriting [3,4]

## → Proof & Specification Techniques

- Inductively defined sets, rule induction [4,5]
- Datatype induction, primitive recursion [5,7]
- General recursive functions, termination proofs [7<sup>b</sup>]
- Proof automation (part 2) [8]
- Hoare logic, proofs about programs, invariants [8,9]
- C verification [9,10]
- Practice, questions, exam prep [10<sup>c</sup>]

## Sets

Email: [tutores@163.com](mailto:tutores@163.com)

QQ: 749389476

<https://tutores.com>

## Sets in Isabelle

程序代写代做 CS编程辅导

Type **'a set**: sets over type **'a**

→  $\{\}, \{e_1, \dots, e_n\}$

→  $e \in A, A \subseteq B$

→  $A \cup B, A \cap B, A - B, \neg A$

→  $\bigcup_{x \in A. B\ x}, \bigcap_{x \in A. B\ x}, \bigcap A, \bigcup A$

→  $\{i..j\}$

→  $\text{insert} :: \alpha \Rightarrow \alpha \text{ set} \Rightarrow \alpha \text{ set}$

→  $f'A \equiv \{y. \exists x \in A. y = f\ x\}$

→ ...

# Proofs about Sets

程序代写代做 CS编程辅导

Natural deduction pr

- equality:  $\llbracket A \subseteq B \rrbracket \Rightarrow A = B$
- subset:  $(\bigwedge x. x \in A \Rightarrow x \in B) \Rightarrow A \subseteq B$
- ... **find\_theorems**

## Bounded Quantifiers

程序代写代做 CS编程辅导

→  $\forall x \in A. P\ x \equiv \forall x. P\ x \rightarrow P\ x$

→  $\exists x \in A. P\ x \equiv \exists x. P\ x$

→ balll:  $(\bigwedge x. x \in A \implies P\ x) \implies \forall x \in A. P\ x$

→ bspec:  $\llbracket \forall x \in A. P\ x; x \in A \rrbracket \implies P\ x$

→ bexl:  $\llbracket P\ x; x \in A \rrbracket \implies \exists x \in A. P\ x$

→ bexE:  $\llbracket \exists x \in A. P\ x; \bigwedge x. \llbracket x \in A. P\ x \rrbracket \implies Q \rrbracket \implies Q$

# The Three Basic Ways of Introducing Theorems

程序代写代做 CS编程辅导

## → Axioms:

Example: `axiom refl: "t = t"`

Do not use. Ever. Like your logic inconsistent.

## → Definitions:

WeChat: [cstutorcs](#)

Example: `definition inj where "inj`

`f ≡ ∀x y. f x = f y → x = y"`

Introduces a new lemma called `inj_def`.

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

## → Proofs:

QQ: 749389476

Example: `lemma "inj (λx. x + 1)"`

<https://tutorcs.com>

The harder, but safe choice.

# The Three Basic Ways of Introducing Types

程序代写代做 CS编程辅导

→ **typedecl**: by name

Example:

Introduces new type `names` without any further assumptions

→ **type\_synonym**: by abbreviation

Example:

WeChat: [cstutorcs](#)

**type\_synonym** `α rel = "α ⇒ α ⇒ bool"`

Introduces abbreviation `rel` for existing type `α ⇒ α ⇒ bool`

Assignment Project Exam Help

Type abbreviations are immediately expanded internally

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

→ **typedef**: by definition as a set

Example:

QQ: [749389476](#)

**typedef** `new_type = "{some set}" <proof>`

Introduces a new type as a subset of an existing type.

<https://tutorcs.com>

The proof shows that the set on the rhs is non-empty.

## How typedef works

程序代写代做 CS编程辅导

# How typedef works

程序代写代做 CS编程辅导

## Example: Pairs

程序代写代做 CS编程辅导

$(\alpha, \beta)$  Prod

① Pick existing type  $\rightarrow$  bool

② Identify subset:

$$(\alpha, \beta) \text{ Prod} = \{f \mid \lambda(x :: \alpha) (y :: \beta). x = a \wedge y = b\}$$

③ We get from Isabelle:

- functions Abs\_Prod, Rep\_Prod
- both injective
- $\text{Abs\_Prod} (\text{Rep\_Prod } x) = x$

④ We now can:

- define constants Pair, fst, snd in terms of Abs\_Prod and Rep\_Prod
- derive all characteristic theorems
- forget about Rep/Abs, use characteristic theorems instead

## Example

程序代写代做 CS编程辅导

$$\begin{array}{c}
 \langle \text{skip}, \sigma \rangle \quad \text{[QR Code]} \quad \frac{\llbracket e \rrbracket \sigma = v}{\langle x := e, \sigma \rangle \longrightarrow \sigma[x \mapsto v]} \\
 \frac{\langle c_1, \sigma \rangle \longrightarrow \sigma' \quad \langle c_2, \sigma' \rangle \longrightarrow \sigma''}{\langle c_1; c_2, \sigma \rangle \longrightarrow \sigma''}
 \end{array}$$

WeChat: cstutorcs

Assignment Project Exam Help

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

QQ: 749389476

$$\frac{\llbracket b \rrbracket \sigma = \text{True} \quad \langle c, \sigma \rangle \longrightarrow \sigma' \quad \langle \text{while } b \text{ do } c, \sigma' \rangle \longrightarrow \sigma''}{\langle \text{while } b \text{ do } c, \sigma \rangle \longrightarrow \sigma''}$$

<https://tutorcs.com>

## What does this mean?

程序代写代做 CS编程辅导

- $\langle c, \sigma \rangle \longrightarrow \sigma'$  for a relation  $(c, \sigma, \sigma') \in E$
- relations are sets:  $\text{state} \times \text{state}$  set
- the rules define a set

WeChat: cstutorcs

Assignment Project Exam Help

**But which set?**

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

QQ: 749389476

<https://tutorcs.com>

## Simpler Example

程序代写代做 CS编程辅导

$$\frac{n \in N}{n + 1 \in N}$$

- $N$  is the set of natural numbers  $\mathbb{N}$
- But why not the real numbers?  $0 \in \mathbb{R}, n \in \mathbb{R} \implies n + 1 \in \mathbb{R}$
- $\mathbb{N}$  is the **smallest** set that is **consistent** with the rules.

WeChat: cstutorcs

### Why the smallest set?

Assignment Project Exam Help

- Objective: **no junk**. Only what must be in  $X$  shall be in  $X$ .
- Gives rise to a nice proof principle (rule induction)
- Alternative (greatest set) occasionally also useful: coinduction

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

## Rule Induction

程序代写代做 CS编程辅导

$$\frac{n \in N}{n + 1 \in N}$$

induces induction principle

**WeChat: cstutorcs**

$$\llbracket P\ 0; \bigwedge n. P\ n \implies P\ (n + 1) \rrbracket \implies \forall x \in N. P\ x$$
